**Udder care
Juvelit
teatspray/udderspray**
This is probably the best product there is! Disinfectant skin care is what you should call it. We use alcohol and acetic acid combined with a high dosage of natural emollients to get the greatest udder condition you can get!

**Udder care
Juvelit-micro**
The new generation product for udder care has arrived! Juvelit Micro, a concentrate, 1 litre gives 5 litres of ready to use product. A product caring rather than aiming to kill as much bacteria as possible. Field studies, running over several years has proven a result beyond expectations! Please get in contact for product samples and more information.

Juvelit the original

Juvelit product of the future

Disinfectant without the use of klorhexidin or Iodine, according to: "A European suspension test for the evaluation of efficacy of disinfectants in food hygiene".

Approved by the Danish Veterinary Institute & The Swedish Milk Association.

Juvelit has a great capacity of remoistening and refattening the skin which is essential for a good skin condition

Juvelit contains a lot of refattening agents, which help to keep the skin soft and healthy.

Juvelit is safe to use and is in no way hazardous to the user or the environment.

Field studies on several farms over many years, has shown results that are more than overwhelming.

Frequency of mastitis has decreased.

General skin condition is excellent.

Cleaning of teats before milking is much easier.

Juvelit has also proven to have a fly repellent effect.

Easy to apply with spraying without hazards for the user, as the case when spraying Iodine or klorhexidin products.

Please get in contact for product samples and more information.

Juvelit Micro

The new generation product for udder care has arrived! Juvelit Micro, a concentrate, 1 litre gives 5 litres of ready to use product. A product caring rather than aiming to kill as much bacteria as possible. Field studies, running over several years has proven a result beyond expectations!

Juvelit-micro is the product of the future
Juvelit-micro creates an environment where bacteria related to mastitis can't reproduce, meaning that there will be no rapid increase in bacteria on the teats or udder surface after Juvelit-micro has been applied.

At the same time, the natural background flora of protective good bacteria will stay intact.

Juvelit-micro is safe to use and is in no way hazardous to the user or the environment.

Field studies on several farms, has shown results that are more than overwhelming.

Cell counts, has generally been constantly under 100000 cells/cm³ milk.

Frequency of mastitis has decreased.

The need for new recruiting has decreased.

General skin condition is excellent.

Cleaning of teats before milking is much easier.
